

# MedleyText Quickstart

## Inserting Code Block

**Try it out:** insert a **Javascript** block by typing `<js>` or `<javascript>` on the line below (has to be on an empty line):

Then try typing in some Javascript code in the block you inserted. It'll be properly syntaxed like:

```
var str = "Hello World";
```

*\*Bonus: use the shortcut method to insert a css code block*

## Insert language block via Toolbar

You can insert a code block via the syntax dropdown on the toolbar. It also supports auto-suggest.

**Try it out:** Highlight then syntax the line of code below to **Javascript** using use the toolbar:

```
var str = "Hello World";
```

*\*Bonus: click on the `</>` icon to insert the currently selected block*

## Exiting a Code Block

To exit a code block, use the shortcut **Ctrl + Enter** (**Cmd + Enter** on Mac) to insert an unstyled line.

**Try it out:** Exit out of the code block below using the shortcut:

```
//focus on me, then use shortcut Ctrl + Enter
```

*\*Bonus: try using the **ctrl + i** shortcut (**cmd + i** for Mac) or the **eraser** tool in the toolbar to unsyntax the code block*
